RELEVANT EXPERIENCE

Mobile App Developer, RN Sync (Capstone Project) **Sep 2025 – Present**

- Developing and iterating on an iOS mobile app using **React Native** to integrate and display **real-time ICU sensor data**.
- Built and shipped **mobile UI** components and **service integrations**, with a focus on **testability, reliability,** and **synchronization**.
- Implemented backend services using **Node.js** and **Python (AWS Lambda, REST APIs)** and containerized services with **Docker** to support secure, scalable deployment.
- Designed **event-driven client–service communication patterns** supporting **background services, asynchronous updates,** and **resilient state synchronization**

Web Developer, Queen's University IT Services **Sep 2025 – Present**

- Brought back post-internship to support a **high-priority Cybersecurity Hub** initiative with responsibilities spanning **product design, architecture,** and **front-end development.**
- Defined **information architecture** and **user flows** for a multi-audience SharePoint site, ensuring frictionless navigation for students, staff, and faculty.
- Built SPFx components using **TypeScript & React** to implement **role-based redirects, secure navigation,** and **improved load performance.**

Project Manager Intern, Queen's University IT Services **May 2024 – Aug 2025**

- Led product development for an **automated operating-plan** intake system across multiple departments, reducing processing time from **2-3 months to < 4 weeks**; recognized by the CIO for delivery the fastest planning cycle in department history
- Built executive **Power BI dashboards**, enabling visibility into **300+ projects** (forecasting, overdue alerts, stakeholder views)
- Participated in **agile development cycles** including requirement breakdown, implementation, testing, and stakeholder review within an **enterprise IT environment**.
- Presented **technical demos** and **documentation** to cross-functional stakeholders to drive adoption of internal tools.
- Independently designed and built an **AI-powered RESTful API (FastAPI, SQLAlchemy)** to automate transcript-to-action workflows using **LLM pipelines**, improving structured task generation and decision tracking.

EDUCATION

Bachelor of Applied Science in Computer Engineering, Queen's University **Sep 2021 – May 2026**

- **Specialization:** Software Engineering – Option in Artificial Intelligence & Computer Systems
- **Relevant Coursework:** Machine & Deep Learning, AI, Data Structures & Algorithms, Distributed Systems, Database Management, Computer Vision, Cryptography & Network Security, Performance Analysis
- **Extracurricular Activities:** Hyperloop Design Team Technical Engineer, Queen's Rugby Varsity Club Player
- **Awards:** Queen's Excellence Scholarship, Student Spotlight Award

TECHNICAL KNOWLEDGE

- **Programming:** C#, Python, JavaScript/TypeScript, C++, C, SQL
- **Mobile & Systems:** Mobile application development, service integration, app state management, API-driven architectures (React Native); familiarity with Android Studio and Java-based systems
- **Frameworks & Libraries:** React, REST APIs, Spring Boot (familiar), Next.js, Android tooling (Android Studio – familiar)
- **Developer Tools:** Git, GitHub, Azure DevOps (CI/CD), Docker, Node.js, VS Code, AWS
- **Operating Systems:** Linux-based development environments; familiarity with embedded system constraints
- **Software Practices:** Object-oriented design, automated testing fundamentals, debugging, code reviews
